

## Spring Bean scopes

| Scope                          | Description                                                                                                                                                                                                                                                                             |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">singleton</a>      | Scopes a single bean definition to a single object instance per Spring IoC container.                                                                                                                                                                                                   |
| <a href="#">prototype</a>      | Scopes a single bean definition to any number of object instances.                                                                                                                                                                                                                      |
| <a href="#">request</a>        | Scopes a single bean definition to the lifecycle of a single HTTP request; that is each and every HTTP request will have its own instance of a bean created off the back of a single bean definition. Only valid in the context of a web-aware Spring <code>ApplicationContext</code> . |
| <a href="#">session</a>        | Scopes a single bean definition to the lifecycle of a HTTP <code>Session</code> . Only valid in the context of a web-aware Spring <code>ApplicationContext</code> .                                                                                                                     |
| <a href="#">global session</a> | Scopes a single bean definition to the lifecycle of a global HTTP <code>Session</code> . Typically only valid when used in a portlet context. Only valid in the context of a web-aware Spring <code>ApplicationContext</code> .                                                         |
